AgenPro, MIB Designer, MIB Explorer hang on Mac OS before main window

Problem

AgenPro, MIB Explorer, or MIB Designer does hang after accepting license and confirming to set a MIB repository path or to install accompanied files.

Root Cause

There seems to be. bug in the Mac OS X Java runtime regarding the Aqua look & feel support. Using the file chooser while the main windows (the frame) is not displayed yet, results in a deadlock.

Solution

Tool	Workaround	
AgenPro	1. Create a text file named `AgenPro4.cf` in your home directory 2. Add the following line to that file: ``` LookAndFeel=com.jgoodies.looks.plastic.Plastic3DLookAndFeel ``` 3. Restart AgenPro	
MIB Explorer	Disable the installation check which is displayed after the license agreement by adding the following lines to a (new) file `mxp4.cf` file in your users home directory and replace "4.3.0" with your version. This problem should be solved with MIB Explorer 4.3.1 and later: ``` mibexplorer.installer.installedPath= mibexplorer.installer.installedVersion=4.3.0 ``` After the main window is displayed, please install you MIB files, examples, etc. with File->Install...	
MIB Designer	Follow the steps described here.
