Usage FAQ

This section contains solutions for common issues or queries associated with using the SNMP4J API.

View one of the following issues or queries for more information:

- Can I use a TransportMapping with two Snmp instances?
- How-to implement SNMPv3 GETNEXT with SNMP4J?
- How to send a broadcast request for discovery of SNMP entities?
- How to use Diffie Hellman Key Exchange with SNMP4J?
- I can get a few objects (OIDs) without problems but when I want to get more at once the API returns "null", why?
- Why does GETBULK return less variable bindings than expected?
- Why do I get a bad overall performance when using a Snmp instance for each Thread?
- Why do I get timeouts when using a Snmp instance per request?
