Upgrading from SNMP4J 2.x to 3.x

The following changes need to be considered when upgrading from SNMP4J 2.x to 3.x:

1. SNMP4J 3.x requires Java 9 or later (for the DTLS support)
2. In version 3.x the following security protocols are no longer available by default: **AuthSHA** and **AuthMD5**. To add them call

```
SecurityProtocols.addAuthenticationProtocol(new AuthSHA());
SecurityProtocols.addAuthenticationProtocol(new AuthMD5());
```
