

# How-to disable splash screen when using command line interface?

You can disable the AgenPro 3.x splash screen by running it with the following command:

```
java -Djava.awt.headless=true -jar agenpro3.jar -?
```

The -? Option will print the command line help. You can replace that option by using any other supported option.

The Java option "-Djava.awt.headless=true" suppresses the splash screen.
