

Where can I find the TestAgent and SampleAgent config files?

The files **SNMP4JTestAgent.cfg** and **SNMP4JTestAgentBC.cfg** are create by the agent to store persistent data:

- **SNMP4JTestAgentBC.cfg** is created/written at agent startup to store the SNMPv3 boot counter.
- **SNMP4JTestAgent.cfg** is created/written when the agent is shutdown by SIGTERM (Ctrl-<C>) or its configuration is saved through the SNMP4J-CONFIG-MIB.

By default, the config files are stored in the working directory of the agent.
